

Issue Description:

Recently, IRR CLM940 Support Impairment Rating for Multiple Teeth was voted as approved into the R3.1 standard. During the voting period, 2 comments came in questioning the way the wording was proposed.

This is how it has been approved to read in Section 4 Variable Segment Population Rules, 11 d.

*11 d. Multiple occurrences of the same body part can only occur when impairment is assigned to the same body part on multiple sides i.e. left and right and the jurisdiction requires that the same body part be sent twice, **and** when Permanent Impairment Body Part Code = 16 Teeth.*

Proposed change:

*11 d. Multiple occurrences of the same body part can only occur when impairment is assigned to the same body part on multiple sides i.e. left and right and the jurisdiction requires that the same body part be sent twice, **or** when Permanent Impairment Body Part Code = 16 Teeth.*

Does the committee agree that this IRR be considered clerical since it is a new change to a recently voted IRR? Clerical IRRs will bypass the voting process.
